**DETAILED ACTION**

This office action follows a response filed on December 18, 2006. Claims 1-12, 14, and 16-21 are pending.

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12, 14, and 16-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Schmid *et al.* (U.S. 6,800,699).

Schmid *et al.* (U.S. 6,800,699) teaches a process for production of aqueous polymer dispersions in the presence of a transition metal complex, dispersing agents, and optionally organic solvent, and wherein the olefinically unsaturated monomer is present in an aqueous medium as a dispersed phase having an average droplet size diameter  $\leq 1000$  nm, *i.e.*, a mini-emulsion (claim 1). The catalyst system comprises a transition metal complex having the formula shown below.

As seen from the claim, substituents R<sup>4</sup> to R<sup>9</sup> is selected from C<sub>6</sub>-C<sub>14</sub> aryl identically or differently substituted by one or more halogens or singly or multiply halogenated C<sub>1</sub>-C<sub>12</sub> alkyl

groups (such as trifluoromethyl; col. 8, line 40). Activators are disclosed in column 11, lines 25-36 and claim 9. Cationic/anionic/non-ionic emulsifiers are described in col. 12, line 10+ and claim 13. Polymerization of olefins is disclosed in column 6, lines 25-32 and claims 10-12. Use of additives is disclosed in column 21, lines 27-29. End use of polymer includes paper sizing compositions, carpet backing, molded foams, textile and leather applications, *etc.*; see col. 19, line 62 – col. 20, lines 1-67.

The applied reference has a common inventor and common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

#### ***Allowable Subject Matter***

3. Claim 21 is allowed, as indicated previously.

#### ***Response to Arguments***

4. Applicant's arguments with respect to the rejection of claims over Kristen *et al.* (WO 01/44325) have been fully considered and are persuasive. Indeed, Kristen *et al.* does not teach a polymerization process using a mini-emulsion having an average droplet diameter  $\leq 1000$  nm. Consequently, the rejection has been withdrawn.
